REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:
2. The examiner considered the Applicant's Amendment filed on 12-29-2008 and after updated search, no other prior art of record has taught that which was presented in the amended claims
3. Therefore, claims 1-25 are allowable.
4. Independent claims 1, 7, and 13, when considered as a whole, are allowable over the prior art of record (Matoba et al., Patent # 6,392,669, hereinafter Matoba, Pietropaolo et al., Patent # 6,351,765, hereinafter Pietropaolo, Mizuno, Patent 3 6,380,953, Nakajima, Patent Number: 5,410,369, and Gagnon et al., Patent #6,522,342, hereinafter Gagnon). Matoba teaches a reservation registration apparatus, method, and storage medium (see column 2, line 41), that combines a reservation subject icon (see column 3, line 41), a means for recording the start time of a piece of media (see column 3, line 28), and elements being controlled by defined start times in the timeline (see column 3, lines 28-41 and figure 6).

Matoba is supplemented by Pietropaolo who further teaches a media editing system similar to that of Matoba, and also teaches the use of a time based display area (see column 11, line 55), the functionality of being able to move icons into this display area (see figure 9 and column 11, line 52), a receiving of input media from the reservation subject, the input having at least one component (video) (see column 1, lines 5-12, and column 2, lines 4-10), the system receiving media of different formats (see column 1, lines 5-12 and column 2, lines 4-10 and lines 35-43) and controlling the

beginning and ending times based on the users placement of the media in the timeline (see column 11, line 52 through column 12, line 21).

Matoba and Pietropaolo are further supplemented by Mizuno who further teaches an apparatus for displaying a Gantt chart displaying scheduling information (see column 1, lines 64-67 and column 2, lines 17-27), similar to that of Matoba and Pietropaolo, and further teaches a control mechanism for controlling a power supply (see column 10, lines 30-39).

Matoba, Pietropaolo, and Mizuno are further supplemented by Nakajima who further teaches a system for use in setting up reservation registration for program content in a television broadcasting apparatus (see column 1, lines 7-23 and column 7, lines 14-24), similar to that of Matoba, Pietropaolo, and Mizuno, and further teaches a CPU that continually check (even in power OFF state) the reservation start times against the current time in order to turn the device power ON upon the current time reaching the reservation time and then further operable to control the reception of content (see column 7, lines 56-66, column 8, lines 50-54, and in column 14, lines 5-20).

Matoba, Pietropaolo, Mizuno, and Nakajima are further supplemented by Gagnon who further teaches a system which receives audio/video data and displays the content in a time divided display (see column 1, lines 35-42, column 19, lines 10-17, and column 17, line 56 through column 18, line 6, along with figures 12 and 14), similar to that of Matoba, Pietropaolo, Mizuno, and Nakajima, and further teaches receiving data in analog/digital formats possibly through an optical connection, where when

received the diverse formats are converted for use (see column 1, lines 35-42, column 8, lines 20-35, and column 8, line 61 through column 9, line 10).

However, specifically the prior art of record fails to clearly teach or support the limitations of *a reservation registration apparatus/method where a user drags a subject icon onto a time based display area, taking up space according to time requirements and displaying a pop-up display showing a reservation information display division, where a selection mechanism is further provided to associate input media with the reservation subject, where the input media is generated by a component, the selection mechanism including: an input selector to select at least one component for input, a mixing device to mix media of analog, digital, and optical formats when more than one component is selected, and an output selector to connect the selected component with a selected output selected from analog output and digital output. These limitations in accordance with the remainder of the claim language are deemed allowable.*

5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
